

Principles of feminist data visualization

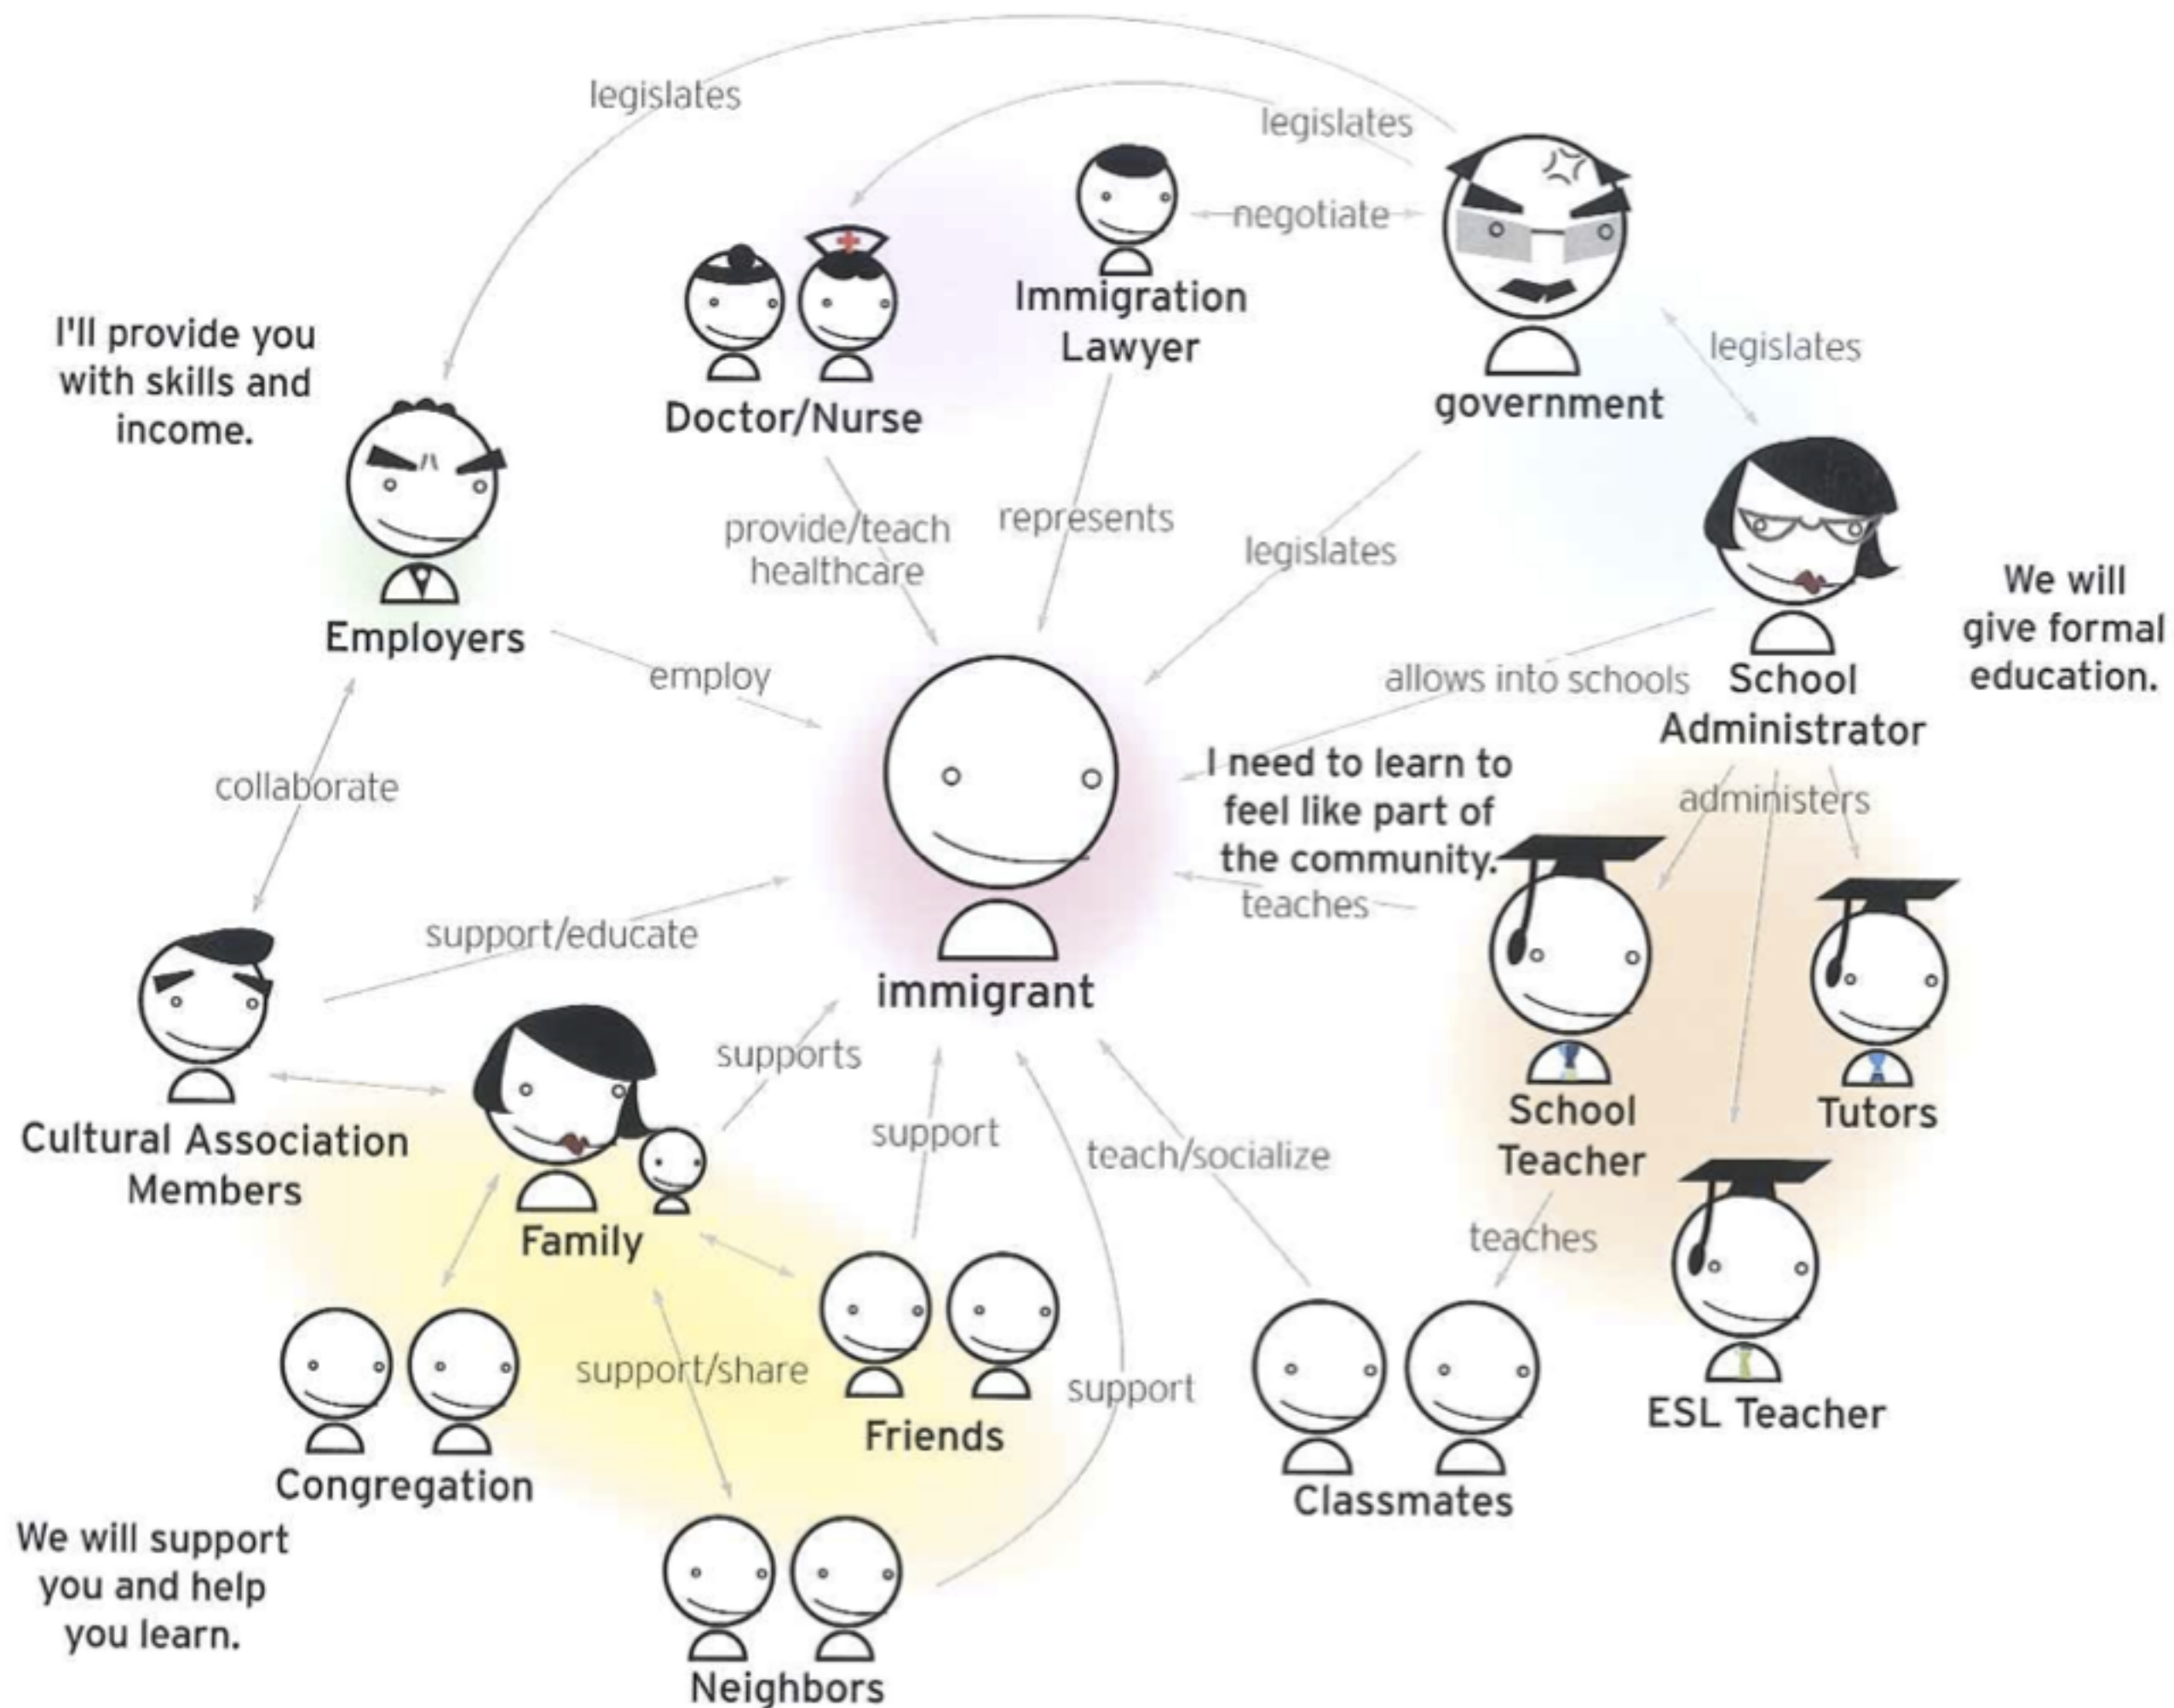

- 1. Rethink Binaries**
- 2. Examine power and aspire to empowerment**
- 3. Embrace pluralism**
- 4. Consider context**
- 5. Legitimize embodiment and affect**
- 6. Represent uncertainty**
- 7. Make labor visible**

* D'Ignazio, C. & Klein, L. Feminist Data Visualization. Published in the proceedings from the Workshop on Visualization for the Digital Humanities at IEEE VIS Conference 2016.

Before you start: Think about speakers and speaking situations

1. Make a stakeholder map

2. How could stakeholders in the system use a map/data to speak with each other?

Stakeholders I heard

- United Way
- MUMS
- Clients
- Delegation
- Funders
- Parole Officer
- DOC
- Media/Public opinion
- Peer groups?
- State-level Policymakers
- Employers
- Landlords

As you work

- 1. Can structural forces (e.g. racism, prison-industrial complex, gentrification) be put on the map?**
- 2. Map what is missing**
- 3. Can your map be evocative, emotional, surprising?**
- 4. Can your map work to shift cultural norms or reduce stigma?**
- 5. Prioritize the perspectives and voices of those most marginalized by the system. Do not victimize them or reproduce stereotypes.**

Don't forget

1. Put your own perspective/voice/body/situation on the map - who is your team and what is their relation to the issue?
